Paper 1: Correction: Cross-species translational modelling of targeted therapeutic oligon

Bibliographic Information

- **Title:** Correction: Cross-species translational modelling of targeted therapeutic oligonucleotides using physiologically based pharmacokinetics
- **Authors:** Derbalah, A., Stader, F., Liu, C. et al.
- **Journal:** Journal of Pharmacokinetics and Pharmacodynamics (2025) 52:45
- **DOI:** <https://doi.org/10.1007/s10928-025-09993-4>

Paper Type: GENERIC

Quick Take

This is a correction notice for the original article by Derbalah et al., correcting the misspelling of author Iain Gardner's name from 'Ian Gardner' to 'Iain Gardner'. No other changes were made to the scientific content.

Executive Summary

The correction addresses a typographical error in the author list of the original publication. The name 'Ian Gardner' was corrected to 'Iain Gardner' to accurately reflect the author's identity. This ensures proper attribution and maintains the integrity of the scientific record. The correction does not alter any data, analyses, or conclusions of the original study.

Scientific Context & Motivation

Corrections are a standard mechanism in scholarly publishing to rectify errors in published articles. They are issued when mistakes are identified post-publication that could affect the interpretation or attribution of the work. In this case, the error was limited to an author's name, which, while not affecting the scientific findings, is important for accurate bibliographic records and author recognition.

✂ Methodological Snapshot

This is a correction notice, not a research study. The methodology involves identifying the error, notifying the journal, and publishing a formal correction linked to the original article. The process follows standard guidelines from the Committee on Publication Ethics (COPE).

📄 Detailed Analysis

The correction is straightforward: a single author's first name was misspelled. Such errors can arise during manuscript preparation, typesetting, or proofing. The correction ensures that the

author Iain Gardner is correctly credited for his contributions to the cross-species PBPK modelling of therapeutic oligonucleotides. This type of correction is common and does not raise concerns about the underlying science.

Domain Context

In the field of pharmacometrics and PBPK modelling, accurate author attribution is essential for collaboration and credit. The original article likely involved complex translational modelling; the correction does not impact the model's validity or the study's conclusions. Researchers using the original work should update their references to reflect the corrected name.

☒ Key Findings

The sole finding of this correction is the amendment of the author name 'Ian Gardner' to 'Iain Gardner'. The original article's pharmacokinetic modelling and translational findings remain unchanged.

Strengths & Limitations

Strengths

- Prompt correction ensures proper attribution and avoids confusion in citation databases.
- Transparent acknowledgment of the error maintains trust in the publication process.

Limitations (Acknowledged by Authors)

- No limitations are applicable to a correction notice.

Limitations (Expert Review)

- The correction notice itself provides no additional scientific insight beyond the name change.

Generalizability

Not applicable; this is a metadata correction with no impact on the generalizability of the original study.

Future Directions

Expert Commentary

While a simple name correction may seem trivial, it underscores the importance of meticulous attention to detail in scholarly publishing. Accurate author attribution is critical for career recognition and bibliometric analyses. The rapid issuance of this correction reflects well on the journal's commitment to accuracy.

Bottom Line

The correction is a minor administrative update that does not affect the scientific validity or conclusions of the original article. Readers and researchers can continue to cite the work with confidence, using the corrected author name.
